Interdisciplinary Session [IA] Arctic Research

Scopes

This session invites presentations from a wide range of topics related to the Arctic, including all disciplines of natural sciences, engineering, humanities and social sciences.

The Arctic is experiencing rapid environmental and amplified climatic changes, creating significant challenges for people living in this region and various impacts around the globe. We have been trying to elucidate the whole picture of these changes in the Arctic and their phenomena, but many open questions still remain. The Arctic change also has impacts on the global climate as well as ecosystems and human societies in higher-middle latitudes, which is also a scope of the session.

We welcome the contributions on the latest findings on the ongoing change in the Arctic, as well as its past change and perspectives on future change, improved understanding of processes and mechanisms, its impact on our society. We also welcome submissions from the results of the ArCS II Project.

Interdisciplinary Session [IW] Whole atmosphere

Scopes

Scope: Earth's lower, middle, and upper atmosphere interact with one another through various kinds of vertical coupling processes induced by waves, physical and chemical processes, and energy input from the sun and magnetosphere. The viewpoints of both aeronomy and meteorology, and related interdisciplinary studies are essential to understanding a wide altitude region from the troposphere to the thermosphere comprehensively as "whole atmosphere". This session provides an opportunity to present and discuss observational, theoretical, and modeling studies focusing on a variety of phenomena in each layer or across multiple layers of the earth's atmosphere.
